

Jacob Mattie

Vancouver | 778-710-7554 | jacob@qimbet.com
github.com/qimbet | linkedin.com/in/qimbet/ | qimbet.com

Full-stack software developer with a **mathematics** background connecting data intake systems to API design and clean UI. Reliability-focused **production software** from architecture to development.

Languages

Bash
C++
C#
Python
SQL

Data

ACID APIs
CRUD
PostgreSQL
REST
Redis

Testing

Playwright
End-to-End
Test Automation
Log Tracing

Tools

AI Harnesses
CLI-navigation
CI/CD
Docker
vim

BSc. Mathematics, 2022, Simon Fraser University

Work Experience

Quantitative Researcher — Full-Stack

Private Practice: River Wealth

Vancouver, BC

11/2024 - Ongoing

Q: What data exists that might let us predict stock growth and market behaviour?

- Built production data pipelines scraping daily performance metrics for over 45,000 financial instruments with Redis, Celery workers, and Celery-Beat scheduling within a Django framework.
- Designed fault-tolerance infrastructure to accommodate unreliable external data sources, surfacing errors via journalctl log tracking on across stratified fault levels.
- Fully provisioned the office's IT stack through the configuration of a headless local linux server's systemd files through SSH, ensuring maximal uptime of the data engine.
- Developed bash-based CI/CD tooling using rsync, git, and custom logic to validate code stability when pushing changes from development environments to production.
- Automated 20%** of company-wide workload through Python scripting and process standardization.

Test Technologist

IBC Technologies

Burnaby, BC

6/2022 – 9/2023

Q: How can we safely optimize heat transfer from a boiler's combustion chamber?

- Automated hardware validation processes by leveraging IoT microcontrollers and PLC systems, streaming test data into **cloud-connected repositories** for analysis.
- Built high-throughput data analysis workflows in MATLAB for multi-million-point datasets, **reducing validation time by over 600%**.

IT Technician (Internship)

BC Cancer Research Centre (BCCRC)

Vancouver, BC

09/2018 – 01/2019

Q: How much digital freedom can we grant researchers without compromising network security?

- Managed user access controls and permissions within a segregated research network, enforcing data isolation and **cybersecurity** policies across multiple user groups.
- Assisted in network recovery during facility-wide outage caused by a malware incident, supporting administrators in restoring connectivity and validating **system integrity** across endpoints.

Volunteering

Automation Technologist

TRIUMF - Canada's Particle Accelerator

Vancouver, British Columbia

05/2025 - Ongoing

Q: What modern technological advances have resolved longstanding engineering problems?

- Contributed the **technical foundations** of 3 scientific publications (in preparation) on distributed control systems in nuclear physics laboratories.
- Developed a containerized EPICS **deployment pipeline** (Docker + Bash), leading a modernization initiative for a legacy control software operating over \$1.5B in infrastructure.
- Coded a Raspberry Pi-based stepper motor control system, merging hardware wiring, driver design, and Python-based interface through a transistor array for **automated and repeatable** experimental control.
